

PUBLIC MEETING

- Thursday, Aug 1, 2024
- 10:00 a.m. - 12:00 p.m.
- 1911 Boundary Street
City Hall, 2nd Floor -
Council Chambers
Beaufort, SC 29902

CHARLES/CRAVEN STREET AND PORT REPUBLIC/CARTERET STREET DRAINAGE IMPROVEMENT PROJECT

PROJECT PURPOSE

McCormick Taylor, in coordination with the South Carolina Office Resilience and the City of Beaufort, plans to design and implement stormwater drainage improvements throughout the Charles/Craven Street and Port Republic/Carteret Street project areas to alleviate persistent local flooding and stormwater drainage issues. This project was identified through the completion of “The Point and Downtown Drainage Study” completed in August 2022.

FUNDING

The project is funded by the American Rescue Plan Act grant through the South Carolina's Office of Resilience's ARPA-Funded Stormwater Infrastructure Program (ASIP).

PROPOSED IMPROVEMENTS

These project areas are located within natural depressions and much of the infrastructure was installed in the early 1900's and are therefore undersized and inadequate to convey the city's increasing storm events and rising high tides. Proposed stormwater improvement plans include new and enlarged stormdrain pipes, new drainage inlets and drainage structures, and flap gates at outfalls to limit tidal water intrusion into the system. At the completion of the project, the affected roadways will be resurfaced, and sidewalks disrupted by the project will be repaired. Stormwater best management practices will be constructed to improve the stormwater's water quality being discharged into the Beaufort River. This project will result in temporary street closures to allow for the excavation and placement of the storm-drain infrastructure. Road closures will be closely coordinated with business and property owners well in advance.

Existing Conditions

Proposed Conditions

PROJECT TIMELINE

Final Design: Fall 2024

Construction: December 2024

Project Completion: Summer 2026
